

**Dear customer,**

Below please find the rules for calculating the Fuel Adjustment Factor (FAF) for road transport services.

### **FAF Fuel Surcharge Calculation Rules**

The Fuel Adjustment Factor (FAF) is dependent on diesel fuel prices published by ORLEN. Its level is determined as a percentage, in accordance with the price ranges assigned and presented in the table below.

FAF is presented as a separate line item on the invoice, ensuring transparency and enabling ongoing verification of transport costs in the context of fluctuating fuel prices.

The charge is applied on the invoice documenting the sea freight transport service, on the date of its issuance.

### **Update Frequency**

The surcharge level is updated cyclically based on published fuel price quotations, according to the following rules:

- quotations from Friday, Saturday and Tuesday apply to invoices issued on Monday, Tuesday and Wednesday,
- quotations from Wednesday and Thursday apply to invoices issued on Thursday and Friday.

### **Scope of Application**

The above rules apply to both import and export services.

### **Data Source**

Fuel price data is available on the ORLEN website – Fuel Price Archive: Ekodiesel Diesel Oil:

<https://www.orklen.pl/pl/dla-biznesu/hurtowe-ceny-paliw#paliwa-archive>

The detailed conversion table is provided below.

The above rules apply from May 25, 2026.

Should you have any questions, please do not hesitate to contact us.

Kind regards,  
The Kuehne + Nagel Team
