

Customs clearance

# All-in-one solutions that simplify CBAM for your business

The Carbon Border Adjustment Mechanism (CBAM) is a policy that comes with complexities—fortunately, there is a way to keep trade flowing smoothly.

# CBAM compliance, without the headache

CBAM compliance doesn't have to be a burden—let's make it easy for you. Our scalable, secure, and purpose-built digital platform, backed by a team of experienced customs specialists, supports you every step of the way.

But what does that actually look like in practice? Let's take a closer look.

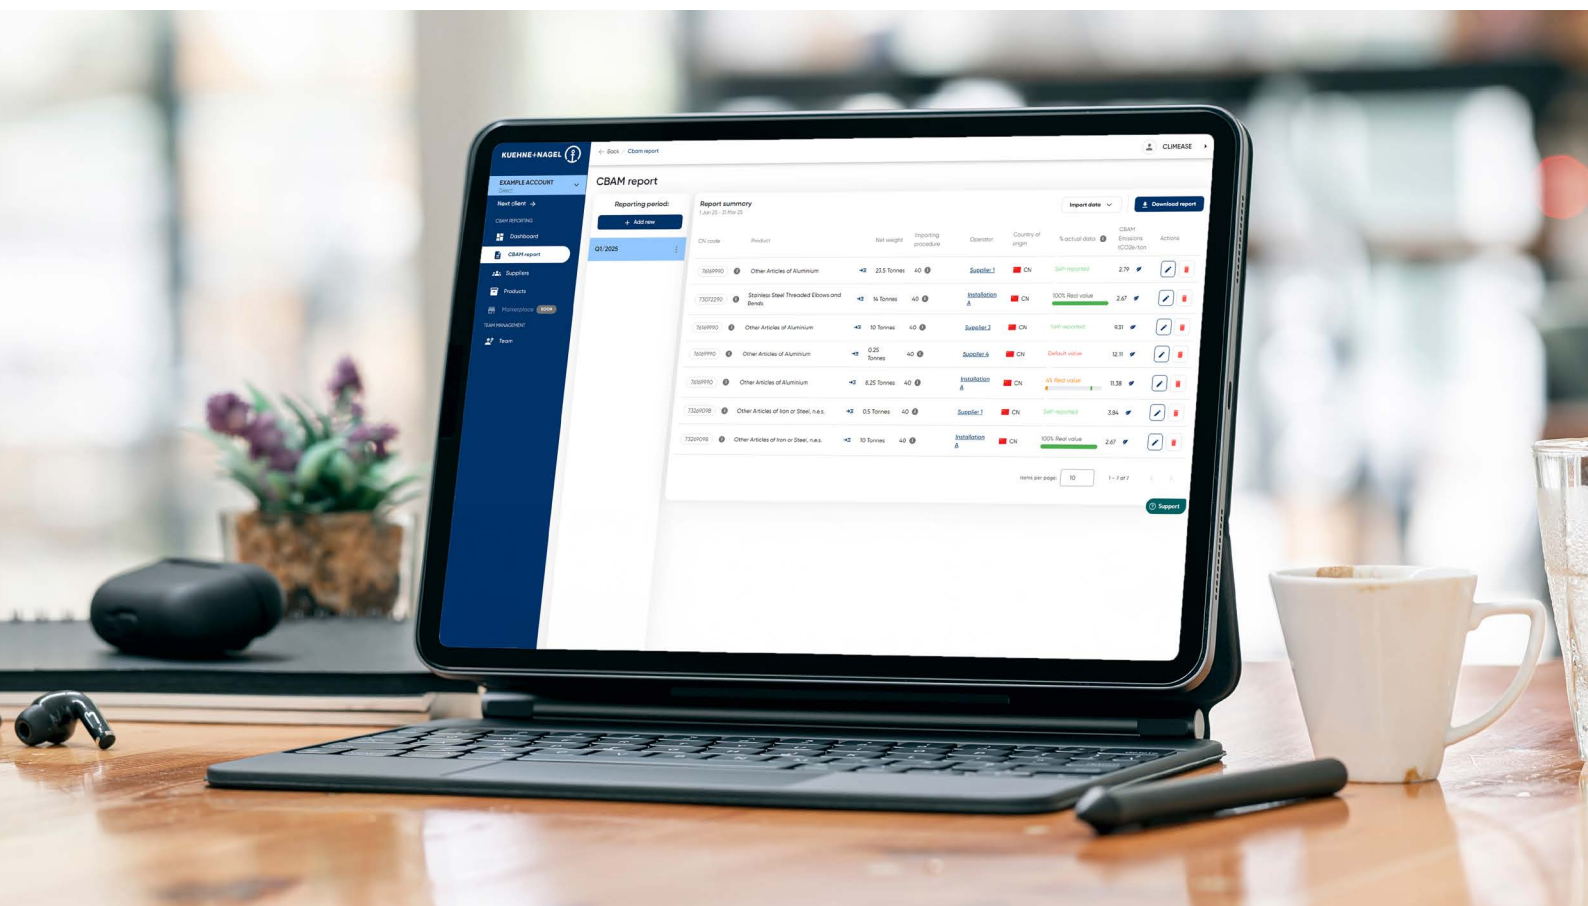

## Extracting CBAM data

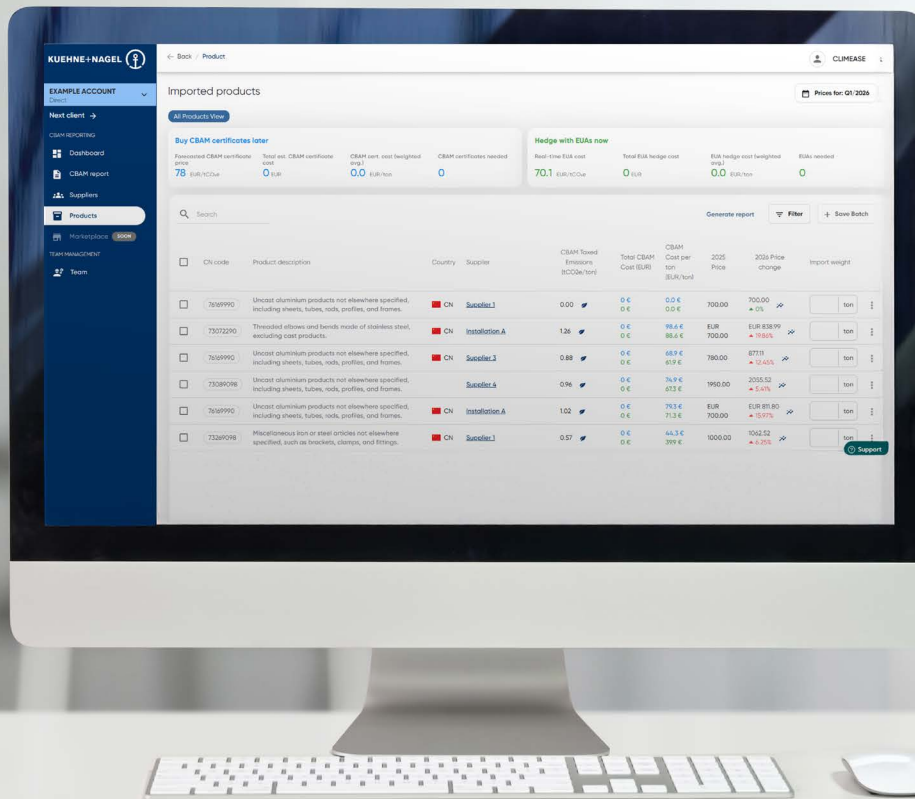

Acting as your expert customs broker, we identify your in-scope products for each importer of record. For third-party clearances, the importer of record must submit a complete data set, which we'll then compile.

## Calculating and reporting embedded emissions

We engage directly with your non-EU suppliers in their own language to collect verified emissions data, helping you avoid costly default values and ensure data accuracy.

## Generating your EU Commission-compliant CBAM report

Our service provides you with a complete, audit-ready report that's ready to submit directly to the CBAM registry. This way, you don't have to worry whether the report is aligned with the EU Commission requirements—it's fully compliant.

## Target your top CBAM cost contributors

Visualise which products or suppliers are driving up your carbon costs. Identify low-emission alternatives and use data insights to make strategic sourcing decisions.

## Forecast your CBAM certificate cost exposure

Our platform models the number of certificates you'll need and estimates your CBAM costs under different scenarios. This supports better budgeting and supply chain planning ahead of 2026.

**Interested in seeing how our CBAM solution could work for you?**
