

Fuel Floater

Based on the development of fuel prices during the last years, we have implemented a fuel floater in April 2017 as a variable surcharge on the agreed pre- and on-carriage haulage rates.

To ensure a proper visibility and tracking, the fuel floater is based on the average diesel price published monthly by the Belgian government on the following website:

→ [Statbel energieprijzen](#)

This serves as comprehensible basis for the calculation of the monthly diesel price.

The calculation methodology is as follows:

Average fuel price month A will determine the surcharge for transports in month C.

Example:

Average diesel price in April 2021:	1,4869 Euro
Fuel surcharge for transports in June 2021:	11%

On the next page, you will find the fuel surcharge overview based on the average diesel price. In case of any questions, please do not hesitate to contact us.

Seafreight Management,
Kuehne + Nagel Luxembourg
